

# EZ Adjust Spreader Bar

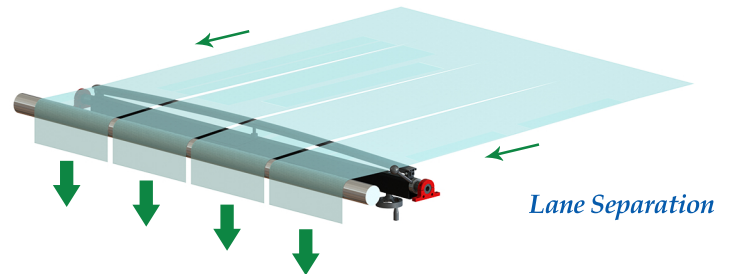

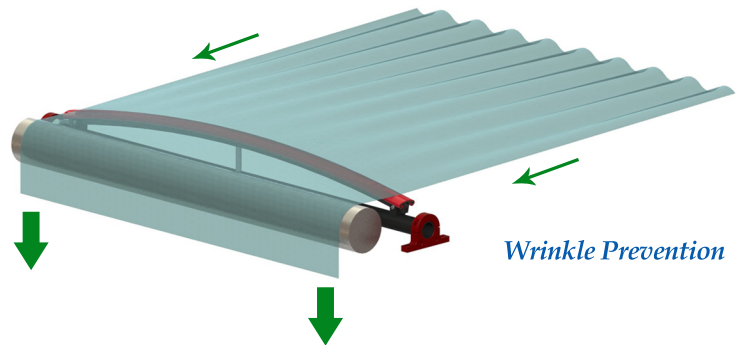

Pearl's rendition of bowed rollers. The spreader bar offers an innovative, cost-effective solution for applications such as bag or pouch making, printing, laminating, and nonwovens, as well as blown film operations. Simple in design, they effectively prevent wrinkles or create lane separation. The adjustment wheel is located on the outside edge, making adjustments safer and easier! To prevent kinking, the EZ Adjust has predetermined adjustment stops that limit the travel of the bow.

## Features:

- Prevents wrinkles from forming
- Great for lane separation
- Works with all web types
- Will not scratch the film
- No tension required
- No moving parts
- Self-cleaning
- Easy to install

## Options:

- Top mount or inside-to-inside mounting
- Various ultra-low coefficient of friction bow coverings
- Can be heated or cooled
- Custom built to your specifications
