

Air Cylinders

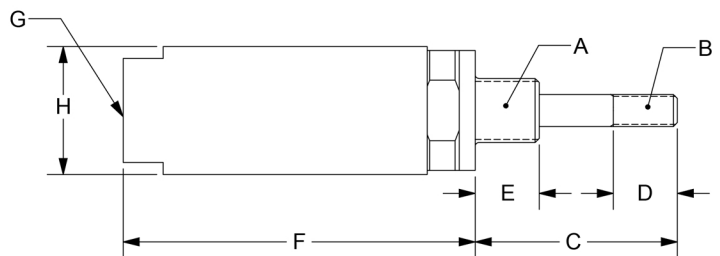

Pearl offers two types of Air Cylinders: single acting spring return and double acting. Our cylinders are available in various bore sizes and stroke lengths. Choice of repairable and non-repairable styles available. Standard cylinders bodies are typically made from either aluminum or stainless steel, but different materials can be requested for unique applications.

Pearl air cylinders are longer lasting, as proven in our testing lab, versus higher production competitor air cylinders.

Features:

- High speed design
- Quiet operation
- Long-life, built to last
- Repairable or non-repairable
- Various bore sizes
- Different stroke lengths
- Optional blow through hole
